

BREAKING NEWS: View the round up and interviews from the leading industry figures who attended IBC2012

Storage in the cloud

[<< view all IBC Daily News](#)*10 September 2012*

XOR Media

By Carolyn Giardina

XOR Media, the newly independent company formerly the broadcast group of SeaChange, is showcasing its open cloud-capable Universal MediaLibrary storage system with simultaneous NAS and SAN access. This means that files can be accessed over Fibre Channel, iSCSI, CIFS, NFS, and FTP without reconfigurations or gateways.

The UML T-series is the enterprise-level model with storage starting from 72TB up to 216TB in 5RU storage matrix. It can scale up to 144PB in a cloud. Its performance starts from 17,000Gbps per UML and scales up to 34,000Gbps in a cloud. The UML E-series is a compact storage system that offers up to 48TB in 3RU chassis. The UML integrates with the MXF server to create a collaborative production environment with Apple Final Cut Pro, Avid Media Composer, and Adobe Premiere Pro.

The XOR MediaServer 1200 is a standalone, broadcast-quality video server that offers multi-standard, multichannel, and multiformat operations. It is a high-density edge video server for channel ingest and playout featuring 'Stream-through,' multi-format back-to-back playback on a single output port, and built-in storage of up to 16TB HDD or 4.8TB SSD in a 3RU footprint. 6.C29
